Debonding sleeves are used on plain-ended wall ties, like the Ancon PP21 or PPB, at vertical movement joints. The tie will restrain the masonry against lateral wind loads whilst the sleeve will allow the masonry to expand or contract.

Debonding sleeves should be installed with a 10mm gap at the end to allow for expansion of the masonry.

Note: All spacings are maximums. The type of cavity wall tie and spacing will be determined by the cavity width, height of brickwork, wind loading and type of building.
